

# The Earth

10,000

Kilometers

Coordinate System: World Robinson  
Projection: Robinson  
Datum: WGS 1984  
False Easting: 0.0000  
False Northing: 0.0000  
Central Meridian: 0.0000  
Units: Meter

For Scenario A, I chose the World Robinson projection because it is easy to visualize the relative position of continents on the Earth without the extreme distortions of other common projections such as Mercator. I also provided an inset map of the Earth from Space projection to make the connection between 2-dimensional projections of the Earth, an oblate spheroid.
